

Energy Policy

One of the Eldor's goal is to improve continuously the energy performances and the Energy Management System to be compliant with the requirements (national & international legislation and laws, regulations and mandatory standards) related to the energy efficiency, use and consumption.

Eldor's main targets are encouraging the participation of interested parties, improving the awareness through all-level trainings and being environmentally and economically sustainable by considering the Energy Management System during all processes.

Eldor Group commits, with the intent of implementation, to:

- ✓ Use energy resources efficiently with the support and participation of all the employees
- ✓ Ensure effective energy usage without compromising on comfort and operations
- ✓ Improve continuously energy performances in parallel with "Sustainable Development" approach,
- ✓ Improve research and implementation to reduce greenhouse gas emissions with minimum environmental impact manner,
- ✓ Set, review and improve continuously objectives and energy targets,
- ✓ Increase energy efficiency during energy distribution and consumption phases
- ✓ Make energy efficiency sustainable by utilize all kinds of knowledge, resources, new technologies and alternative energy sources,
- ✓ Introduce the Energy Management System, efficiency, policy, objectives and energy targets during the orientation training,
- ✓ Ensure the availability of information and necessary resources to achieve objectives and energy targets,
- ✓ Organize training programs to raise Energy Management System awareness and culture to all levels of the company by using all needed knowledge, documents and resources,
- ✓ Communicate with customers, authorities, interested parties and subcontractors to create shared value and benefits about Energy and Energy Management,
- ✓ Support the procurement to purchase energy efficient products and services that impact energy performance,
- ✓ Support design activities to consider energy performance improvement.
